

# Environmental Technician

## About the Job

Candidate should have a minimum of two years experience in general environmental project work including property inspection, and asbestos and lead based paint abatement oversight.

### Primary Responsibilities:

As part of a team of environmental professionals, candidate will perform oversight and air monitoring of asbestos and lead abatement projects, conduct environmental inspections for asbestos, lead and other hazardous materials, perform indoor air quality assessments and assists with Phase I and Phase II environmental site assessments. Evaluate field data and assist with report and proposal preparation. Candidate must demonstrate creative problem solving skills, analytical skills and good writing skills.

### Qualifications:

- College training in an engineering or scientific field. Associate's or bachelor's degree a plus.
- Minimum of 2 years technical experience in a technical field.
- Proficient with computers and standard office software.
- Licensed in Missouri as an Asbestos and Lead Inspector. If not currently licensed, must be able to obtain license in six months.
- Certified in Missouri as an Air Sampling Professional. If not currently certified, must be able to obtain certification in one year.
- OSHA 40-hour trained.
- Must be a self-starter and able to work independently and productively while meeting strict project deadlines

Competitive compensation package.
