

Requisition #110701 Senior Environmental Engineer

Location: St. Louis, MO

Description:

Executes complex assignments requiring the use of advanced techniques, resulting in the development of new or improved processes, equipment and/or technological methods. Responsible for performing, supervising, and sealing designs on various major projects. Prepare scopes of work, cost estimates and proposals. May develop and evaluate plans for major projects. Progressive design and project management responsibilities. Provide leadership, guidance and instruction to less experienced staff members. Some marketing responsibilities. May assess feasibility or soundness of proposed applications when data is insufficient or testing is advisable. May coordinate departmental or divisional project studies, reports or project design assignments. Regularly meets and corresponds with clients, subcontractors or outside personnel. Preparation of work plans, investigation reports, feasibility studies, remedial design and implementation for CERCLA, RCRA, and other state lead programs. Project management of above projects. Other duties as assigned. Candidate should have a wide background in the environmental field including site investigations, risk assessment/management, remedy selection, construction oversight and project/personnel management. Experience with fast turnaround design-build projects would be helpful. Project experience should include remediation, small infrastructure type projects, and contractor oversight.

Qualifications:

Bachelor's degree in civil, environmental or geological engineering from accredited program. Minimum 10 years related experience (completion of master's degree in related field may be substituted for one year of experience). CERCLA, RCRA or other state lead program experience on investigation through remediation. Excellent written & verbal communication skills. Strong analytical and problem solving skills. This position requires an individual capable of applying intensive and diversified knowledge of principles and practices to broad areas of assignments. Must be capable of devising new approaches to problems encountered. Previous consulting experience preferred. Professional Engineer registration preferred.

EOE
